

AEROSPACE ENGINEERING (LM52)

(Brindisi - Università degli Studi)

Insegnamento AIRCRAFT POWERPLANT NEW CONCEPTS, CONTROL AND MAINTENANCE C.I.

GenCod A006483

Docente titolare Antonio FICARELLA

Insegnamento AIRCRAFT POWERPLANT NEW CONCEPTS, CONTROL AND

Lingua

Insegnamento in inglese

Settore disciplinare ING-IND/09

Percorso CURRICULUM AEROSPACE DESIGN

Corso di studi di riferimento AEROSPACE ENGINEERING

Tipo corso di studi Laurea Magistrale

Sede Brindisi

Crediti 9.0

Periodo

Ripartizione oraria Ore Attività frontale: 81.0

Tipo esame

Per immatricolati nel 2021/2022

Valutazione

Erogato nel 2022/2023

Orario dell'insegnamento

<https://easyroom.unisalento.it/Orario>

BREVE DESCRIZIONE DEL CORSO

AIRWORTHINESS AND ENVIRONMENTAL CERTIFICATION; The Design Process; Engine Selection: Parametric Cycle Analysis; Engine Selection: Performance Cycle Analysis; Engine Component Design: Rotating Turbomachinery, Concept, Design Tools; Engine Component Design: Combustion Systems, Concept, Main Burner, Afterburners; Aircraft Engine Controls - Engine Modeling and Simulation; Aircraft Systems.

Software applications for the design of aircraft engines and systems, using softwares as Python, TESP, Colaboratory, OPENMODELICA, Octave. Engine performance Lab, Engine Monitoring Lab.

PREREQUISITI

Course Requirements

Knowledge of the operating principles of fluid machinery and fluid dynamics. Basic elements of design and technology of fluid machines. Knowledge of aircraft propulsion and the basic principles of flight mechanics.

OBIETTIVI FORMATIVI

Aims of the course

(knowledge and understanding)

- Specialist knowledge of propulsion, advanced elements of mechanical design of aircraft engines.
- Knowledge of the internal fluid dynamics.
- Insights on design and technological features and performance of different types of engines.
- Insights into automatic controls and system design aimed at providing an integrated view of the aerospace product.
- Knowledge of advanced propulsion systems.
- Knowledge of specific technical terms in English.

(applying knowledge and understanding)

- Understanding of the main features of a project of the engine.
- Ability to perform sketches and preliminary dimensioning of the components of an aircraft engine.
- Ability to take action in the main stages the project of an aircraft engine.
- Advanced capabilities for the analysis of systems and control techniques.
- Ability to see the product in the form of system integrated complex.

(making judgements)

- Ability to analyze the mission requirements of the aircraft and to evaluate the necessary engine performance.
- Ability to understand the technological issues and system integration for the engine.
- Ability to understand the problems of research and development of an aircraft engine or of an aviation system.

(communication skills)

- Ability to communicate with experts in other fields of engineering for the integrated design of the engine.

(learning skills)

- Development of learning skills that enable to continue to study for the most part autonomously.
 - Availability update the acquired knowledge.
-

METODI DIDATTICI

Lectures; practical experiences in laboratories; homework (design project).

Laboratory

Engine performance Lab, Engine Monitoring Lab.

<https://sites.google.com/site/greenenginela2/home>

Homework (design project)

Software applications for the design of aircraft engines and systems, using softwares as Python, TESP, Colaboratory, OPENMODELICA, Octave. Application examples and design of aircraft engines and systems. Turbofan, turbofans with high bypass ratio, turboprop propeller design. Systems for Civil and military aircraft, helicopters, light aircraft. Fluid-dynamics numerical simulations applied to engines and systems design.

Exam procedures

The exam consists in the preparation of a Homework (design project) and an oral interview (even remotely carried out).

A design project related to aircraft engines or systems will be conducted. Homework assignments will be due at least one month before the examination. The deliverables are a written report (in digital format, with any files used for calculations and the relevant bibliography) and the discussion of the work. You must acknowledge all references (both literature and people) used; all the deliverables will be sent by email to the instructor at least 10 days before the oral examination. The oral examination consists of the discussion of the work of the year and a series of questions on the matters stated in the course program for the evaluation of acquired knowledge on the principles of operation of engines and aircraft systems, their performance and the principles of design and in general on the technologies of these systems.
