PREREQUISITI

Knowledge and understanding of the concepts taught in PHYSICS OF MATTER MOD. I & MOD. II (LM56)

METODI DIDATTICI

The Course is carried on through classroom theoretical lectures (about 90% of the total teaching hours) and practical Laboratory sessions (about 10% of the teaching hours), the latter focussing on the applications of MOVPE and MBE technology to the synthesis of compound semiconductor hetero- and nano-structures.

MODALITA' D'ESAME

The exam consists of an oral examination/colloquium aimed at determining to what extent the student has gained an overall knowledge of the topics treated within the course, and its ability to discriminate between different semiconductor technologies, their most relevant areas of applications and understand the fundamental physical-chemical principles behind these technologies.

PROGRAMMA ESTESO

Introduction to Semiconductors and their Applications, Crystallography of elemental and compound semiconductors, Electrons band structure of semiconductors, Point defects in semiconductors, Line and plane defects in semiconductors, Phase diagrams of semiconductor compounds, Production of Electronic Grade poly-Silicon, Bulk crystal growth technologies of c-Silicon, Bulk crystal growth technologies of III-V compound semiconductors, Fabrication of Semiconductor Wafers, Epitaxy and epitaxial heterostructures, Liquid Phase Epitaxy, Principles of VPE technology, VPE-chlorides and VPE-hydrides of Si and III-V compounds, VPE-hydrides of II-VI compounds, MOVPE technology of compound semiconductors, Laboratory I: VPE/MOVPE, MBE technology of compound semiconductors, Laboratory II: MBE.
