

COMMUNICATION ENGINEERING AND ELECTRONIC TECHNOLOGIES

(Lecce - Università degli Studi)

Insegnamento MATHEMATICAL METHODS FOR ENGINEERING

GenCod A003085

Insegnamento MATHEMATICAL METHODS FOR ENGINEERING

Insegnamento in inglese MATHEMATICAL METHODS FOR

Settore disciplinare MAT/05

Corso di studi di riferimento COMMUNICATION ENGINEERING AND
Tipo corso di studi Laurea Magistrale

Crediti 9.0

Ripartizione oraria Ore Attività frontale:
Beneficiariimmatricolati nel 2019/2020

Erogato nel 2019/2020

Anno di corso 1

Lingua INGLESE

Percorso PERCORSO COMUNE

Docente Antonio LEACI

Sede Lecce

Periodo Primo Semestre

Tipo esame Orale

Valutazione Voto Finale

Orario dell'insegnamento
<https://easyroom.unisalento.it/Orario>

BREVE DESCRIZIONE DEL CORSO

Measure theory. Theory of distributions. Elements of Functional Analysis. Complements on Ordinary Differential Equations. Equations of Mathematical Physics.

PREREQUISITI

Prerequisites: Ordinary differential equations, multiple, line and surface integrals. Complex Analysis, linear algebra, elementary physics.

OBIETTIVI FORMATIVI

Aims and Scope: Concepts of advanced mathematical Analysis - Problem solving for ordinary and partial differential equations arising from physics or engineering.

MODALITA' D'ESAME

Final examination: The final (written) exam consists in solving 2 exercises (8+8 points) and answering 2 theoretical questions (7+7 points) related with the topics of the course.

PROGRAMMA ESTESO

Measure theory. (hours: 9) Positive measures. Measurable functions. Integral. Limit theorems in integration theory. Real and vector measures, total variation. Absolute continuity and singularity of measures. Image measure. Lebesgue's Measure in \mathbb{R}^n . Product Measures and Fubini's Theorem. Parameters dependent integrals. Functions Gamma and Beta of Euler. Convolution.

Functions of bounded variation (BV) and Riemann-Stieltjes Integral. (hours: 9) Pointwise and essential variation. Monotonous functions. Features of bounded variation functions. Absolutely continuous functions. Cantor's function. Definition and existence of the integral of Riemann-Stieltjes. Integral's properties. Hausdorff's measures. Self-similar fractals.

Theory of distributions. (hours: 8) Definition and examples. Derivative of a distribution. Examples of Differential Equations in D' . Temperate distributions. Support of a Distribution, convolution. Fourier Transform in L^1 , L^2 , S , S' .

Elements of Functional Analysis. (ore: 8) The spaces L^1 , L^2 . Banach and Hilbert spaces. Scalar products and induced norms, orthonormal bases. Fourier Series in L^2 . Linear, continuous, compact Operators. Spectral Theory of Compact Self-adjoint Operators.

Complements on Ordinary Differential Equations. (hours: 10) Sturm-Liouville theory for boundary value problems. Connections between boundary value problems and orthogonal developments. Differential Equations with analytical coefficients: regular case; Singular case and Frobenius theorem. Examples of Ordinary Differential Equations Solvable by Series: Equations of Bessel and Legendre.

Equations of Mathematical Physics. (hours: 12) Examples of Partial Differential Equations solved by the method of separation of variables, by series developments and Fourier transform. Boundary value problems, initial value problems, and mixed problems. Heat equation in the strip, and in the whole space. Wave equation in one, two and three dimensions. Wave equation in the half-line and
