

AEROSPACE ENGINEERING (LM52)

(Brindisi - Università degli Studi)

Insegnamento AEROSPACE SYSTEMS (MOD 2) C.I.

GenCod A006161

Insegnamento AEROSPACE SYSTEMS (MOD 2) C.I.

Insegnamento in inglese .
AEROSPACE SYSTEMS (MOD 2) C.I.

Settore disciplinare ING-IND/05

Corso di studi di riferimento
AEROSPACE ENGINEERING

Tipo corso di studi Laurea Magistrale

Crediti 6.0

Ripartizione oraria Ore Attività frontale:
54.0

Per immatricolati nel 2020/2021

Erogato nel 2020/2021

Anno di corso 1

Lingua INGLESE

Percorso CURRICULUM AEROSPACE SYSTEMS

Docente MICHELE GIANNUZZI

Sede Brindisi

Periodo Primo Semestre

Tipo esame Orale

Valutazione

Orario dell'insegnamento

BREVE DESCRIZIONE DEL CORSO

The course aims to analyze the functionality of each aerospace system. It analyses the interdependencies of several systems in routine or emergency conditions. The attention will be focused on the functional aspects of its components and less on their construction solutions. According to this setting, the system should be seen as a "logical block of functionality."

PREREQUISITI

The student needs to know general notions of physics, electrotechnics, thermodynamics, and chemistry.

OBIETTIVI FORMATIVI

Upon completion of the course, students will have acquired:

- The concept of aircraft is intended as a system operating within the air transport system, including, in particular, maintenance.
 - Basic knowledge of systems engineering: definition of requirements, management of interfaces, verification, and validation.
 - The ability to identify the main aerospace on-board systems, the functions they perform, the architectures, the performances, the operating principles, with references to the energy sources that allow each system's operation.
 - The ability to identify the features and design choices made through retrospective analysis of aircraft systems or existing space modules.
 - The ability to apply the concepts learned in class with simple sizing calculations of the on-board systems' elements.

METODI DIDATTICI

The lesson is articulated through a series of sub-chapters repeated - as far as possible - in a standard way:

- The mission of the system
- Interdependence on other systems
- Basic operating principles
- Key components
- Command, control, and warning systems
- Description of the real plant
- Operational aspects of the operation.

MODALITA' D'ESAME

The exam consists of a written test with questions on the various systems and their correlation. An oral test will follow.

APPELLI D'ESAME

ALTRE INFORMAZIONI UTILI

PROGRAMMA ESTESO

Aircraft board systems: Zones / Rooms / Doors; Engine systems; APU; Pneumatic system; Cabin air conditioning and pressurization system; Oxygen system; Fuel system; Hydraulic system; Flight controls; Landing gear and brake system. **Introduction to space systems**

TESTI DI RIFERIMENTO

All lecture notes shown during lessons will be made available in the digital version.

During the lessons, the teacher will refer to the following textbooks:

I. Moir, A. Seabridge, "Aircraft Systems: Mechanical, Electrical and Avionics Subsystems Integration", Volume 21 di Aerospace Series, John Wiley & Sons, 2008.

F. Vagnarelli - "impianti aeronautici" - IBN editore

S. Chiesa, fascicoli tematici su impianti di bordo di vario tipo, Ed. CLUT, Torino.
