BRIEF COURSE DESCRIPTION

This course aims at introducing the students with the main regulatory and taxation issues relate to the digital economy. A central question throughout the different topics will be whether business practices and contracts in a "digital economy" may depart from efficient behavior, and in which cases they may be beneficial or detrimental to society. Real cases which are specific to digital markets will also be analyzed.

Globalisation and digitalisation, together with concerns over corporate tax avoidance, have sparked an international debate about whether tax rules are fit for purpose. The issue of taxing the digital economy figures ever more prominently on policy agendas around the world, while the OECD is striving to reach international consensus on the matter. This course will introduce to the the key points in the debate and analyse the principles for effective and efficient taxation in the digital age.

REQUIREMENTS

Principles of economics

COURSE AIMS

Knowledge and understanding

Students will be able to understand the the main regulatory and taxation issues relate to the digital economy. I

Applying-knowledge and understanding

They will be able to understand the key issues in the international debate about whether tax rules are fit for purpose and to analyse the principles for effective and efficient taxation in the digital age.
