

MATERIALS ENGINEERING AND NANOTECHNOLOGY (LM56)

(Lecce - Università degli Studi)

Insegnamento COMPOSITE AND NANOCOMPOSITE MATERIALS

GenCod A003713

Insegnamento COMPOSITE AND NANOCOMPOSITE MATERIALS

Insegnamento in inglese COMPOSITE AND NANOCOMPOSITE MATERIALS

Settore disciplinare ING-IND/22

Corso di studi di riferimento MATERIALS ENGINEERING AND

Tipo corso di studi Laurea Magistrale

Crediti 6.0

Ripartizione oraria Ore Attività frontale: 54.0

Per immatricolati nel 2019/2020

Erogato nel 2020/2021

Anno di corso 2

Lingua INGLESE

Percorso PERCORSO COMUNE

Docente Antonio GRECO

Sede Lecce

Periodo Primo Semestre

Tipo esame Orale

Valutazione Voto Finale

BREVE DESCRIZIONE DEL CORSO

This course is aimed at providing the basics of composites and nanocomposites materials in view of their application in different engineering fields, using a strong interdisciplinary approach. Competences on polymer matrices and reinforcements, mechanics of anisotropic materials, fabrication technologies of thermoplastic and thermosetting matrix composites are provided.

PREREQUISITI

knowledge of solid mechanics and materials science and technology

OBIETTIVI FORMATIVI

Knowledge and understanding:

The course provides the basis of knowledge to understand and solve complex new problems in design and processing of composite materials accounting for anisotropy and reactive processing

Applying knowledge and understanding

The student will be able to apply the basic knowledge on mechanics of anisotropic materials to the design of simple structural elements. A multidisciplinary approach is presented accounting for chemical, materials and mechanical engineering aspects.

Making judgements

Simplification and synthesis of complex problems is presented in order to promote the judgement and evaluation capabilities of the students

Communication

The course promotes the development of the following skills of the student: ability to expose in precise and formal terms an abstract model of concrete problems, identifying the salient characteristics of them and discarding the inessential characteristics; ability to describe and analyze an efficient solution for the problem under consideration. A seminar on composite properties is assigned to students

Learning skills

Autonomous learning is promoted thanks to the use of: different books and slides, numerical methods, homework exercise to be solved in groups of two.

METODI DIDATTICI

The course is made up of frontal lessons for about 45 hours, and about 10 hours practice with a software implementing micro and macromechanics of composite materials. 10 more hours of laboratory are foreseen, in order to highlight the relevance of anisotropy in mechanical testing, and provide a practical demonstration of the main technologies for composite processing

MODALITA' D'ESAME

Oral exam after a seminar on composite properties and a homework .

APPELLI D'ESAME

ALTRE INFORMAZIONI UTILI

PROGRAMMA ESTESO

Introduction:

matrix and reinforcements. Reinforcement materials: Physical, chemical, mechanical properties of carbon, glass, aramide, basalt, polymeric and natural fibers. Surface treatment of fibers for improved adhesion

Sandwich structures:

Core materials: foams and honeycombs. Mechanical properties of sandwich structures.

Micromechanics

Fiber-matrix interface. Characterization of fiber-matrix adhesion. Calculation of the elastic and ultimate properties of unidirectional laminae from the properties of matrix and fibers

Macromechanics

Elastic properties of a lamina of arbitrary orientation. Failure criteria

Macromechanical behavior of a laminate

Lamination theory. Special cases of laminate stiffness. Mechanical behaviour of anisotropic laminates (Helius Composite Design)

Nanocomposites

Nanofillers, geometries and materials. Preparation of nanocomposites. Characterization of nanocomposites: improvement of properties and analytical prediction of properties.
