All the concepts presented in the "Sistemi Operativi" course in the first level degree "Ingegneria dell'Informazione". Namely, a good knowledge of: UNIX® basic concepts, the UNIX® bash shell, bash scripting, main UNIX® commands

OBIETTIVI FORMATIVI

Overview

The course aims at starting the students off on programming system applications (e.g. a server) on a UNIX® System.

Learning Outcomes; after the course the student should

- * Know the most important functionalities and facilities offered by a UNIX® system, the System Calls (and, more generally, the APIs) offered to access them.
- * Be able to write efficient CLI (Command Line Interface) system and network applications in the C language.
- * Know how to write interoperable applications by complying with the UNIX® standards (SUSv3, SUSv4).
- * Know which are the main differences between the MacOS and the Linux varieties and how to cope with them.

METODI DIDATTICI

The course is strongly oriented towards an hands-on methodology. Students must follow lectures in front of a computer which must be used to reproduce and test what is explained by the teacher-

MODALITA' D'ESAME

Writing a C program aimed at solving a given problem within a given time. Students are free to consult (paper and digital) texts and to use Internet search engines.
