

# MATHEMATICS (LM39)

(Lecce - Università degli Studi)

## Teaching

GenCod A007116

**Owner professor** MARCO PULIMENO

**Teaching in italian** DATA MINING

**Teaching**

**SSD code** ING-INF/05

**Reference course** MATHEMATICS

**Course type** Laurea Magistrale

**Credits** 6.0

**Teaching hours** Ore-Attivita-frontale:  
42.0

**For enrolled in** 2022/2023

**Taught in** 2022/2023

**Course year** 1

**Language** INGLESE

**Curriculum** MATEMATICA PER  
L'INTELLIGENZA ARTIFICIALE

**Location** Lecce

**Semester** Secondo-Semestre

**Exam type** Orale

**Assessment** Voto-Finale

**Course timetable**

<https://easyroom.unisalento.it/Orario>

## BRIEF COURSE DESCRIPTION

The course provides a modern introduction to data mining, which spans techniques, algorithms and methodologies for discovering structure, patterns and relationships in data sets (typically, large ones) and making predictions. Applications of data mining are already happening all around us, and, when they are done well, sometimes they even go unnoticed. For instance, how does the Google web search work? How does Shazam recognize a song? How does Netflix recommend movies to its users? The principles of data mining provide answers to these and others questions. Data mining overlaps the fields of computer science, statistical machine learning and data bases. The course aims at providing the students with the knowledge required to explore, analyze and leverage available data in order to turn the data into valuable and actionable information for a company, for instance, in order to facilitate a decision-making process.

## REQUIREMENTS

Calculus. Probability theory. Linear Algebra. Programming skills.

## COURSE AIMS

The course describes methods and models for the analysis of large amounts of data. Students will gain a solid background with a broad spectrum of basic knowledge related to data mining:

- the students will acquire the basic cognitive tools to think analytically, creatively and critically, and have the abstraction and problem-solving skills needed to cope with complex systems;
- they will gain solid knowledge of data mining models and methodologies;
- they will be able to work on large data collections, including heterogeneous and produced at high speed data, in order to carry out in-depth thematic analyses, drawing on this knowledge to improve the decision-making process.

## TEACHING METHODOLOGY

Frontal lessons using slides made available to students and classroom exercises

---

## ASSESSMENT TYPE

Oral exam. During the exam the student is asked to illustrate theoretical topics in order to verify his/her knowledge and understanding of the selected topics. The student must demonstrate adequate knowledge and understanding of the issues presented or indicated, applying in a relevant manner the theories and conceptual models covered by the study programme.
